

WireTab™

The perfect solution to lost wires.

Electricians wiring a house may leave certain wires dangling for under-cabinet lights, door bells, etc. During drywall installation, those wires may get concealed or placed through the drywall in the wrong location. Finding or repositioning lost wire ends requires cutting and patching drywall, creating imperfections in the wall's appearance, and adding unbudgeted time and cost to the project.

Wire Tab is the perfect solution. Wire Tab hugs the corner of a wall stud, allowing loose wire ends to be threaded through the channel. When drywall is hung, a pre-cut hole is positioned to surround the Wire Tab channel so the wire ends are available and in the correct place.

- Holds the loose end of wire in position during construction
- Ideal for under cabinet lights, security, doorbells, speakers & more
- Small, inexpensive, and easy to use
- Eliminates costly & unsightly holes in drywall
- Can be adapted for a variety of applications, including thick walls
